

MT.KB SERIES

THREE PHASE CONTROLLED BRIDGE

Power Modules

Features

- Package fully compatible with the industry standard INT-A-pak power modules series
- High thermal conductivity package, electrically insulated case
- Outstanding number of power encapsulated components
- Excellent power volume ratio
- 4000 V_{RMS} isolating voltage
- UL E78996 approved 

55 A
90 A
110 A

Description

A range of extremely compact, encapsulated three phase controlled bridge rectifiers offering efficient and reliable operation. They are intended for use in general purpose and heavy duty applications.

The diagram shows three bridge circuit configurations. Each circuit has six terminals labeled A, B, C, D, E, and F. The top terminal A is connected to the common cathode connection of the diodes. The bottom terminal D is connected to the common anode connection of the diodes. The middle terminals B, C, E, and F are the output terminals. In the first diagram (full-controlled bridge), terminals B and C are connected in series. In the second diagram (positive half-controlled bridge), terminals B and E are connected in series. In the third diagram (negative half-controlled bridge), terminals C and F are connected in series.
